Version 5.0 (Build: 34, Revision: 176)

ID: 11547 Remove Terminal Settings Maintenance, Receipt(Character Based), “Don’t tick print receipt” and make it remember last settings for Print Receipt/Preview Receipt.

Due to settings conflict and new option to preview receipt after payment, we have optimized the system to be able to save the last setting that user used. So which ever option the user use, the next transaction will remain the same unless user change it.

### ID: 11553 Add Ipay88 re-query function.

We have received some feedback that due to connectivity issue, user is having issue regarding Ipay88 ewallet payment issue which is sometimes AutoCount not able to proceed with the transaction due to not receiving confirmation from Ipay88 and meanwhile Ipay88 already logged the transaction in. Therefore, we have added this new feature to retry the transaction if failed. The button will appear if an error had occurred during the payment process.

The screenshot displays the AutoCount POS interface. At the top, there's a header with the AutoCount logo and version information. Below this, a form contains fields for 'Promoter', 'Debtor', 'Available Points', and 'Point Earned'. A 'Cash Sale' field is also present. The main area shows a list of items with columns for 'No.', 'Item Code', 'Description', 'UOM', 'Qty', 'Unit Price', 'GST', 'Tax Code', 'Discount Amount', and 'Total'. A modal window for 'Touch 'n GO eWallet' is open, showing logos for 'Touch and Go', 'Boost', 'PrestoPay', and 'Shopee Pay'. The modal includes a 'QR Code' field, a 'Re-query Payment' button (highlighted with a red box), and 'OK' and 'Cancel' buttons. The background form also shows a 'Physical Qty' field.
